

STUDENT TECHCON

Leo's experience

For me this experience was amazing! I finally got to learn how to code my own game. The people teaching us were also students so we got to learn from our peers. They had also only learned how to code just recently so it was cool how quickly they got the hang of it and were able to share it with us. When I heard about tumbling tumble I had no idea what it was but, it was probably my favourite thing. They were these customisable marble runs and challenges to try and complete. For food we got pizza for lunch and fairy floss and popcorn. It was so good! At break Daniel and I got to play basketball with another school. It was a great experience and I would definitely do it again! 9.5/10.

Arlo's experience

I enjoyed being able to make computer-like activities without screens with the turing tumble and I liked how we could play games and code games with not much effort needed and I liked the food but the breaks were a bit short but fun.

Ava's experience

I liked being able to share my ideas and learn how to do different things. My favorite things were being able to customize my own game with coding and doing the Turing Tumble.

Nikolas's experience

I enjoyed the experience of coding and tumbling because I learnt how to code and make a game and I have also learnt how to look at things with a different perspective.
